

KAS Eclipse

The inserting system KAS Eclipse processes envelopes in C6/5 to C4 format with a speed of up to 8,000 cycles per hour. It combines ergonomic design with proven technology that is based on over 40 years of experience in this power range. This innovative technology combines compatible modules with flexibility, quality and ease of use.

The system can handle single sheet forms, reply envelopes and brochures up to a thickness of 7 mm via the enclosure stations.

The complete paper path is monitored by sensors. The system also features intelligent control of envelopes, inserting, processing, double sheets, error pages and levels.

All the information about the system operation is shown on the operating panel display. Through malfunction messages errors can quickly and easily be located and eliminated. Through partial automation, changing between different jobs takes only a few minutes, even if you are switching between C6/5 and C4 applications.

Different input modules for single and continuous sheet processing are available. The switch is also feasible within a few minutes.

The KAS Eclipse envelope system is optionally available with reading devices for all types of codes like OMR, barcode as well as Datamatrix. The system can be equipped with mailpiece tracking as an option.

KAS Eclipse, the
Inserting system for
even greater efficiency.

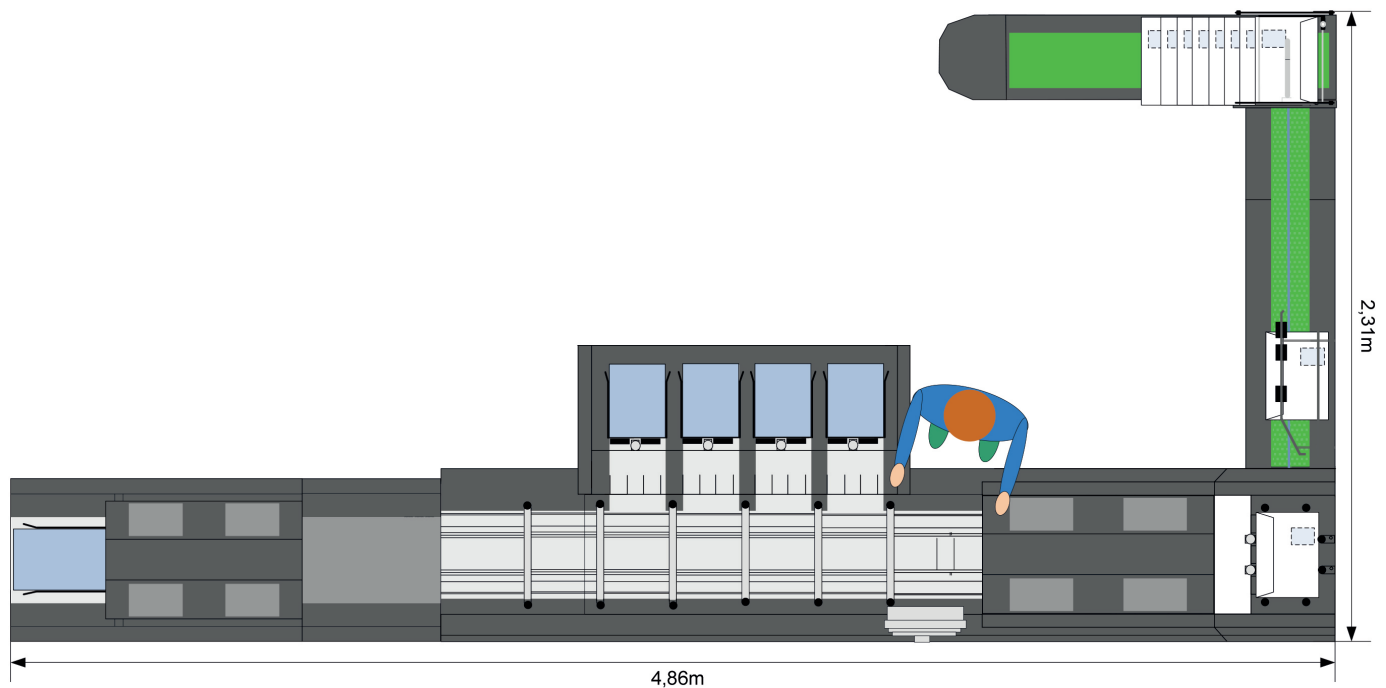

FEATURES KAS Eclipse

- Envelope formats: 229 mm x 110 mm to 335 mm x 250 mm
- Quick format changes between different applications
- Up to 8.000 cycles/hour
- Filling thickness up to 15 mm
- Enclosure processing up to 7 mm
- Central touch screen control panel
- Withdrawal of forms/enclosures from below
- Control of envelopes, inserting, processing, double sheets, error pages and levels
- Diverting bin
- Manual feeding station
- Shingling conveyor
- Flip-flop operation
- Multiple-sheet-feed inserting stations

OUR SERVICES

- Personal consulting on-site
- System integration
- Requirement analysis
- Working out an optimal solution
- On-site training of your employees
- Comprehensive support during the operational phase

Further KAS Products

KAS Compact

The inserting systems **KAS Mailmaster 465** and **KAS Compact** are designed for office environments as well as demanding production environments and process envelopes from C6/5 to C4 at a speed of up to 6,000 cycles per hour.

Switching between different jobs is done in a few minutes, even between C6/5 and C4 applications. All types of reading (OMR, barcode, Datamatrix) are possible.

KAS Mailmaster 465

The ergonomic design with proven technology offers tailored modules with flexibility, quality and ease of use. No limits are set to your requirements with packaging thicknesses up to 15 mm and up to 12 automatic feeding stations, a manual feeding station and enclosures up to a thickness of 7 mm.
