**mailFactory Manager**

## Introducing: **mailFactory Manager** Centralize Control of your Mail Center

During the monitored stages of processing, mailFactory Manager makes it possible to visualize jobs and to control production on the basis of the processing data. mailFactory Manager provides an overview of all inserting jobs in line for processing, displays the progress of jobs in the midst of processing and indicates which jobs could not yet be completed.

mailFactory Manager extends the integration within existing production solutions and overarching workflow systems. mailFactory Manager allows production to be controlled with data that is displayed centrally, on the control monitor. mailFactory Manager supports a variety of formats for the exchange of data, thus simplifying its integration within existing production solutions and overarching workflow systems.

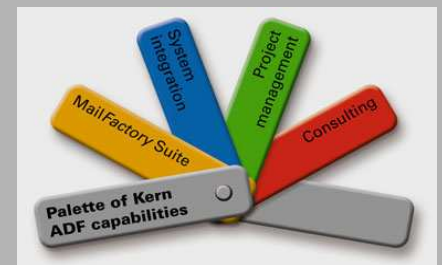

mailFactory Manager incorporates centralized ADF management with an SQL database that houses all job related information, mail piece related data, process specific information and inserter status information. The database is open and extensible, and serves as a central data point for all mailFactory modules.

With the mailFactory Manager you can have complete control of your operation from one centralized point. This enables you to check on progress in multiple areas rapidly and with easy solutions at your fingertips.

### Kern mailFactory

Kern mailFactory is a suite of software products that compliment your production inserting systems and deliver end-to-end production controls from "data to door". Kern mailFactory, like Kern inserters, is modular, allowing you to choose the components you need today and add and scale your solution as your needs change.

### mailFactory Components

- **mailFactory Manager** – Centralized control for your production operations
- **mailFactory FileManager** – extension to enable control file automation
- **mailFactory Document Control** – intelligent database driven inserting and integrity monitoring
- **mailFactory Reporter** – Powerful and flexible web-based, reporting
- **mailFactory Workplace** – Operator dashboard for mailpiece specific controls
- **mailFactory Validation** – camera based integrity validation
- **mailFactory Output Control** – output to post processing ink jet systems
- **mailFactory Postal Reporter** – Server-based address cleansing (CASS, postal presorting PAVE) and manifest preparation
- **mailFactory PROstream** – Server-based, advanced print stream reengineering enabling barcode changes, control file creation and more.
