

Kern 686

Compact Inserting System

kernMail

Inserting with our reliable and compact classic, the Kern 686

The inserting system Kern 686 is the proven, compact inserting system with the ability of processing single sheets up to a size of DIN-A3 and up to 3 inserts.

To insert a DIN-A3 form into a C6 envelope doesn't pose a problem for the Kern 686 inserting system, because the integrated folding systems allow any combination of parallel and cross folding. In just one step the Kern 686 compares, folds and inserts the documents and seals the envelopes at high continuous output.

Patented steel packing pockets hold the forms during the insertion process into the envelope. The documents are

thus fully protected. As with manual inserting, the inserts are correctly put in the fold. When the addressee pulls out the content, nothing will remain in the envelope.

To have control during the process, the Kern 686 is equipped with optical data-matrix reading at the input and the Kern mailFactory® reading module, which guarantees the corresponding content in each envelope.

The module is composed of a standard output reading module complemented with an own control and operation as well as an adjacent diverting bin.

Our Services

- Personal advisory service on-site
- System integration
- Requirement analysis
- Work out an ideal solution
- On-site training of your employees
- Comprehensive support during operational phase

Features

- Document format as from folding unit of at least:
min. 148×80 mm up to
max. 432×318 mm
- Processing of up to 8,000 envelopes per hour
- Envelope format C6 up to C5
- Kern mailFactory® compatible
- Maximum flexibility and efficiency
- Highest document security when processing
- Small to medium production volumes
