

ProductionReporter

Kern Software Solution

kern**Software**

mailFactory® ProductionReporter provides the ability to visualize the information of the production.

mailFactory® ProductionReporter visualizes the information of the production through a web-based application.

Of course the reports can be created and saved in different formats, e.g. PDF. For the analysis, mailFactory® ProductionReporter covers different interests and therefore groups the reports by production, efficiency, error and machine counters.

Using your own filter criteria for all those reports, the amount of data is narrowed down to focus on your interests. The reports can be created based on the filter criteria such as time, job, machine or operator.

The mailFactory® ProductionReporter allows you to bookmark your favourite reports or send them at a recurring time directly to your personal eMail box.

Features

Reports and formats

- mailFactory® ProductionReporter supports web, PDF and Excel based reports. The standardized reports can be furnished with individual customer logos.

Filter criteria, favorites

- A lot of filter criteria are supported to analyze your production. To re-use defined filters, you can save them as favorites.

Independent platform

- Due to the web support no end-user installation is needed on-site. Different internet browsers can be used.

Scheduled Reporting

- You can define to receive your favorite reports at a recurring time directly to your eMail box.

Our Services

- We help to analyze the mail production process and offer consulting to integrate the mailFactory® ProductionReporter optimally in your mailroom environment
- Project management services over the entire integration
- Customizable software components and solutions
- On-site training for your employees
